Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 2614

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 9, 17 are rejected under 35 U.S.C. 102(E) as being anticipated by Holmes et al, U.S. Patent #7,092,712.

In col. 2, lines 5-10, Holmes et al disclose that their system is for a mobile station that is active and camped on in one network can also receive notices, i.e., it is the "target mobile station," of communications on another network with which it is capable of communicating. Fig. 2 of Holmes et al shows a mobile station (10) that is being used in a wireless network as shown by its transmission of channel control information to Base Station (102) and Mobile Database Station (153). Holmes et al also show a database (220) that includes a transmission table that correlates mobile identification number (MIN) of the mobile station with the IP Address, col. 3, lines 1-5. In Fig. 4 Holmes et al he shows translation of the MIN to an IP address in step 412. The database 220 is associated with a packet data server node, i.e., gateway (252) in that it will send translation information (MIN to IP Address) to the gateway.

Claims 2-8, 10-16, and 18-20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Art Unit: 2614

The prior art fails to disclose applicant's 2nd database that will determine a "target packet controller function unit".

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Lioy et al, and Lim.
